

Amendments to the Claims

Please cancel Claims 12 and 16. Please amend Claims 9-11. Please add Claims 36-39.
The Claim Listing below will replace all prior versions of the claims in the application:

Claim Listing

1. (Withdrawn) An antiloading composition comprising a first organic compound, wherein the first compound:
 - has a water contact angle criterion W_g° that is less than a water contact angle W_z° for zinc stearate; and
 - satisfies at least one condition selected from the group consisting of a melting point T_{melt} greater than about 40 °C, a dynamic coefficient of friction F less than about 0.4, and an antiloading criterion P greater than about 0.2.
2. (Withdrawn) The composition of Claim 1, wherein the first compound satisfies at least one condition selected from the group consisting of W_g° less than about 100°, T_{melt} greater than about 70 °C, F less than about 0.4, and P greater than about 0.2.
3. (Withdrawn) The composition of Claim 1, wherein the first compound satisfies at least one condition selected from the group consisting of W_g° less than about 70°, T_{melt} greater than about 90 °C, F less than about 0.3, and P greater than about 0.3.
4. (Withdrawn) The composition of Claim 1, wherein the first compound:
 - satisfies each condition T_{melt} , F , and P of Claim 1; and
 - is represented by a formula selected from the group consisting of $R\text{-OSO}_3^-M^+$, $R\text{CONH}(\text{CH}_2)_3N^+(\text{CH}_3)_2\text{CH}_2\text{COO}^-$, $R\text{-CONR}'\text{CH}_2\text{CO}_2^-M^+$, and $R\text{-O}(\text{CO})\text{CH}_2\text{OSO}_3^-M^+$, wherein
 - R is C6-C18 linear alkyl;
 - R' is C1-C4 linear alkyl; and
 - M^+ is an alkali metal ion.

5. (Withdrawn) The composition of Claim 1, wherein W_g^o for the first compound is about 0° .
6. (Withdrawn) The composition Claim 1, wherein the first compound is selected from the group consisting of sodium lauryl sulfate, sodium decyl sulfate, sodium octyl sulfate, sodium lauroyl sarcosinate, lauramidopropyl betaine, and sodium lauryl sulfoacetate.
7. (Withdrawn) The composition of Claim 1, further including a second organic compound having a W_g^o different from that of the first compound, wherein the composition has a particular water contact angle W_p^o that is determined, at least in part, by the independent W_g^o of each compound and the proportion of each compound in the composition.
8. (Withdrawn) The composition of Claim 7, wherein the composition is selected from a premixed composition and a composition having at least two separate mixable components.
9. (Currently amended) An abrasive product, comprising:
 - a binder support substrate;
 - a binder;
 - an abrasive material affixed to the support substrate by the binder; and
 - an antiloading composition comprising a first organic compound and a second organic compound, wherein ~~the first compound~~ each of the first and second organic compounds independently:
 - has a water contact angle criterion W_g^o that is less than a water contact angle W_z^o for zinc stearate; and
 - satisfies at least one condition selected from the group consisting of a melting point T_{melt} greater than about 40°C , a dynamic coefficient of friction F less than about 0.4, and an antiloading criterion P greater than about 0.2, and

wherein the first and second organic compounds are different, and wherein each of the first and second organic compounds independently

is represented by a formula selected from the group consisting of $R-OSO_3^-M^+$, $RCONH(CH_2)_3N^+(CH_3)_2CH_2COO^-$, $R-CONR'CH_2CO_2^-M^+$, and $R-O(CO)CH_2OSO_3^-M^+$, wherein

R is C6-C18 linear alkyl;

R' is C1-C4 linear alkyl; and

M⁺ is an alkali metal ion.

10. (Currently amended) The abrasive product of Claim 9, wherein the first compound has W_g^o less than about 100° and satisfies at least one condition selected from the group consisting of ~~W_g^o less than about 100°~~, T_{melt} greater than about 70 °C, F less than about 0.4, and P greater than about 0.2.
11. (Currently amended) The abrasive product of Claim 9, wherein the first compound has W_g^o less than about 70° and satisfies at least one condition selected from the group consisting of ~~W_g^o less than about 70°~~, T_{melt} greater than about 90 °C, F less than about 0.3, and P greater than about 0.3.
12. Canceled
13. (Original) The abrasive product of Claim 9, wherein W_g^o for the first compound is about 0°.
14. (Original) The abrasive product Claim 9, wherein the first compound is selected from the group consisting of sodium lauryl sulfate, sodium decyl sulfate, sodium octyl sulfate, sodium lauroyl sarcosinate, lauramidopropyl betaine, and sodium lauryl sulfoacetate.
15. (Original) The abrasive product of Claim 9, wherein the first compound is sodium lauryl sulfate.

16. Canceled.
17. (Withdrawn) A method of grinding a surface, comprising:
grinding a work surface by applying an abrasive product to the work surface to create
work surface swarf; and
providing an effective amount of an antiloading composition at the interface between the
abrasive product and the work surface swarf;
wherein:
the abrasive product comprises a binder support substrate, a binder, and an abrasive
material bound to the support substrate by the binder;
the antiloading composition comprises a first organic compound, wherein the first
compound:
has a water contact angle criterion W_g° that is less than a water contact angle W_z°
for zinc stearate; and
satisfies at least one condition selected from the group consisting of a melting
point T_{melt} greater than about 40 °C, a dynamic coefficient of friction F less
than about 0.4, and an antiloading criterion P greater than about 0.2.
18. (Withdrawn) The method of Claim 17, wherein the first compound satisfies at least one
condition selected from the group consisting of W_g° less than about 100°, T_{melt} greater
than about 70 °C, F less than about 0.4, and P greater than about 0.2.
19. (Withdrawn) The method of Claim 17, wherein the first compound satisfies at least one
condition selected from the group consisting of W_g° less than about 70°, T_{melt} greater than
about 90 °C, F less than about 0.3, and P greater than about 0.3.
20. (Withdrawn) The method of Claim 17, wherein the first compound:
satisfies each condition T_{melt} , F , and P of Claim 19; and

is $R\text{-OSO}_3^-\text{M}^+$, $R\text{CONH}(\text{CH}_2)_3\text{N}^+(\text{CH}_3)_2\text{CH}_2\text{COO}^-$, $R\text{-CONR}'\text{CH}_2\text{CO}_2^-\text{M}^+$, or

$R\text{-O}(\text{CO})\text{CH}_2\text{OSO}_3^-\text{M}^+$, wherein

R is C6-C18 linear alkyl;

R' is C1-C4 linear alkyl; and

M^+ is an alkali metal ion.

21. (Withdrawn) The abrasive product of Claim 17, wherein W_g° for the first compound is about 0° .
22. (Withdrawn) The method of Claim 17, wherein the first compound is selected from the group consisting of sodium lauryl sulfate, sodium decyl sulfate, sodium octyl sulfate, sodium lauroyl sarcosinate, lauramidopropyl betaine, and sodium lauryl sulfoacetate.
23. (Withdrawn) The method of Claim 17, further comprising grinding the surface to a particular water contact angle W_p° by employing a second organic compound having a W_g° different from that of the first compound, wherein W_p° is determined, at least in part, by the independent W_g° of each compound and the proportion of each compound employed.
24. (Withdrawn) The method of Claim 23, further comprising selecting W_p° for compatibility with a coating to be applied to the ground work surface.
25. (Withdrawn) The method of Claim 23, wherein the step of providing the antiloading composition comprises applying at least one compound to the abrasive product or the work surface.
26. (Withdrawn) The method of Claim 23, wherein the abrasive product comprises at least one of the compounds.

27. (Withdrawn) A method of selecting an antiload compound, comprising selecting an organic compound, wherein the compound:
has a water contact angle criterion W_g° that is less than a water contact angle W_z° for zinc stearate; and
satisfies at least one condition selected from the group consisting of a melting point T_{melt} greater than about 40 °C, a dynamic coefficient of friction F less than about 0.4, and an antiload criterion P greater than about 0.2.
28. (Withdrawn) The method of Claim 27, wherein the first compound satisfies at least one condition selected from the group consisting of W_g° less than about 100°, T_{melt} greater than about 70 °C, F less than about 0.4, and P greater than about 0.2.
29. (Withdrawn) The method of Claim 27, wherein the first compound satisfies at least one condition selected from the group consisting of W_g° less than about 70°, T_{melt} greater than about 90 °C, F less than about 0.3, and P greater than about 0.3.
30. (Withdrawn) The method of Claim 27, wherein the first compound satisfies each condition for T_{melt} , F , and P .
31. (Withdrawn) The method of Claim 28, wherein the first compound satisfies at least two conditions selected from W_g° , T_{melt} , F , and P in Claim 28.
32. (Withdrawn) The method of Claim 29, wherein the first compound satisfies at least three conditions selected from W_g° , T_{melt} , F , and P in Claim 29.
33. (Withdrawn) The method of Claim 27, wherein W_g° is about 0°.
34. (Withdrawn) The method of Claim 27, further comprising:
selecting a second organic compound, wherein the second compound has a W_g° different from that of the first compound;

determining a proportion for each compound, whereby a composition comprising the compounds in the proportions has a particular water contact angle W_p° that is due, at least in part, to the W_g° of each compound and the proportion thereof.

35. (Withdrawn) The method of Claim 29, further comprising selecting a W_p° for compatibility with a particular coating.
36. (New) An abrasive product, comprising:
 - a binder support substrate;
 - a binder;
 - an abrasive material affixed to the support substrate by the binder; and
 - an antiloading composition comprising a lauryl sulfate in an amount that reduces the accumulation of swarf during grinding.
37. (New) The abrasive product of Claim 36, wherein the lauryl sulfate is sodium lauryl sulfate.
38. (New) An abrasive product, comprising:
 - a binder support substrate;
 - a binder;
 - an abrasive material affixed to the support substrate by the binder; and
 - an antiloading composition comprising a lauryl sulfate, wherein the lauryl sulfate is the only organic antiloading compound included in the antiloading composition.
39. (New) The abrasive product of Claim 38, wherein the lauryl sulfate is sodium lauryl sulfate.
